-

Academic Projects

- **Mode changing Calculator** (<https://github.com/Mudra1804/Mode-Changing-Calculator.git>)

This project comprises of a calculator in which user can change modes from light to dark and vice versa. It is made from HTML, CSS and JS.

- **Amazon Clone** (<https://github.com/Mudra1804/Amazon-Clone.git>)

This project is developed using HTML, CSS and JS. It replicates amazon front page. It is responsive and user-friendly.

- **Student Study Portal (Python-Django)**

This is an ongoing project which will help students do tasks such as maintain a to-do list, complete their homework, search, perform conversions, etc. through personal interface.

Internships

- **IMD (Radiation Department)** :- Currently interned as a Data Science Intern wherein the task is to create an energy map of radiation and develop an app. I work here as a team member in a group of four. The other tasks include finding insights from the past 30 years of data.
